CONTENTS OF VOLUME 3

Vol. 3, Nos 1–4

SPECIAL ISSUE: HIGH-PERFORMANCE COMPUTING FOR FLIGHT VEHICLES

A. K. Noor and S. L. Venneri: Preface vii

High-performance Computing Systems

J. R. Moulic and M. Kumar: Highly parallel computers: perspectives 1

W. J. Dally, A. Chien, R. Davison, J. A. S. Fiske, S. Furman, G. Fyler, D. B. Gaunce, W. Horwat, S. Kaneshiro, J. S. Keen, R. A. Lethin, M. Noakes, P. R. Nuth, E. Spertus, B. Totty, D. Wallach and D. S. Wills: The J-Machine: a fine-grain parallel computer 7

E. J. Nava: The Sandia Airborne Computer (SANDAC) 17

R. F. Freund and J. L. Potter: HAsP—heterogeneous associative processing 25

Large-scale Simulations on High-performance Computers and Software Issues

S. S. Dosanjh and R. E. Benner: Engineering simulations on high performance computers 33

A. Choudhary, G. Fox, S. Hiranandani, K. Kennedy, C. Koelbel, S. Ranka and J. Saltz: Software support for irregular and loosely synchronous problems 43

M. H. Wright: Issues in large-scale optimization with expensive functions 53

K. K. Mathur and S. L. Johnsson: Communication primitives for unstructured finite element simulations on data parallel architectures 63

A. Sussman, J. Saltz, R. Das, S. Gupta, D. Mavriplis, R. Ponnusamy and K. Crowley: PARTI primitives for unstructured and block structured problems 73

Multidisciplinary and Design/Optimization Applications

P. Kutler: Multidisciplinary computational aerosciences 87

A. K. Noor and M. F. Card: Computational technology for high-temperature aerospace structures 97

A. Godil and A. Bertelrud: Design of a wing shape for study of hypersonic crossflow transition in flight 115

I. W. Tjatra, R. K. Kapania and B. Grossman: Structural non-linearity effects on flutter of a swept wing in transonic flows 131

Computational Electromagnetics, Acoustics and Control

V. Shankar, C. Rowell, W. F. Hall, A. H. Mohammadian, M. Schuh and K. Taylor: Gigaflop (billion floating point operations per second) performance for computational electromagnetics 139

A. Taflove: Re-inventing electromagnetics: supercomputing solution of Maxwell's equations via direct time integration on space grids 153

W. R. Van Dalsem: Numerical simulation of jet noise 169

W. K. Belvin, P. G. Maghami and D. T. Nguyen: Efficient use of high performance computers for integrated controls and structures design 181

R. G. Menon and A. J. Kurdila: Sub-domain decomposition methods and computational controls for multibody dynamical systems 189

Reacting Flows and Turbomachinery

D. J. Singh, J. K. Ahuja and M. H. Carpenter: Numerical simulation of shock-induced combustion/detonation 201

D. Riggins, M. Underwood, B. McMillin, L. Reeves and E. Jui-Lin Lu: Modeling of supersonic combustor flows using parallel computing 217

K. L. Gundy-Burlet: Unsteady two- and three-dimensional Navier–Stokes simulations of multistage turbomachinery flows 231
N. K. Madavan: Unsteady turbomachinery flow simulations on massively parallel architectures 241

Flow Calculations on Parallel Machines
R. K. Agarwal and J. C. Lewis: Computational fluid dynamics on parallel processors 251
G. M. Papadopoulos and K. Molvig: Parallel architectures for fluid flow simulation 261
C. Shu and B. E. Richards: Parallel simulation of incompressible viscous flows by generalized differential quadrature 271
M. A. Fallavollita, J. D. McDonald and D. Baganoff: Parallel implementation of a particle simulation for modeling rarefied gas dynamic flow 283
S. R. Chakravarthy and S. Palaniswamy: Single-zone structured-grid unsteady flow simulations using an nCube-2 MIMD computer 291
L. Dagum: Direct particle simulation on the Connection Machine CM-2 301
C. E. Orozco and O. N. Ghattas: Massively parallel aerodynamic shape optimization 311

Direct Simulation Monte Carlo Methods
B. C. Wong and L. N. Long: A data-parallel implementation of the DSMC method on the Connection Machine 321
T. Bartel and S. Plimpton: DSMC simulations of low-density fluid flow on MIMD supercomputers 333
L. N. Long, M. Kamon, T. S. Chyczewski and J. Myczkowski: A deterministic parallel algorithm to solve a model Boltzmann equation (BGK) 337

Structural Mechanics, Sensitivity and Fracture Calculations on Parallel Machines
E. J. Plaskacz, T. Belytschko and H.-Y. Chiang: Contact–impact simulations on massively parallel SIMD supercomputers 347
S. C. Chuang and R. E. Fulton: Decomposition of sparse matrices on parallel computers 357
Y. Zhang and D. T. Nguyen: Parallel–vector design sensitivity analysis in structural dynamics 365
Amaury F. Junior and M. F. Ahmad: PARFES—PARallel Finite Element Solvers for flow-induced fracture 379

Grid Generation and Advanced Algorithms for CFD
J. F. Thompson: The National Grid Project 393
E. Laurien, H. Holthoff and J. Wiesbaum: Interactive numerical simulation and grid adaption for hypersonic flow 401
M. Holt and A. J. Meade, Jr: Flight vehicle aerodynamics calculated by a Galerkin finite element/finite difference method 413
D. D. Cline and J. A. Schutt: Large-scale simulation of the three-dimensional Navier–Stokes equations 423
N. Qin, X. Xu and B. E. Richards: Newton-like methods for fast high resolution simulation of hypersonic viscous flows 429
T. Aratani: Air flow dynamics around an aerofoil by the stabilized finite difference method 437

Advanced Solid Mechanics, Structures and Fracture Applications
M. S. Shephard, J. Fish and M. W. Beall: Idealization control for the analysis of composite materials 443
S. Yi, G. D. Pollock, M. F. Ahmad and H. H. Hilton: Time-dependent analysis of anisotropic viscoelastic composite shell structures 457
R. S. Harichandran and A. Hawwari: Non-linear random vibration of filamentary composites 469

A. C. Robinson: New approaches for developing high-performance solid-dynamic simulation systems 477
M. H. Swellam, M. F. Ahmad, R. H. Dodds and F. V. Lawrence: The stress intensity factors of tensile-shear spot welds 487

Advances in Visualization Technology and Neural Networks
R. Haber, B. Bliss, D. Jablonowski and C. Jog: A distributed environment for run-time visualization and application steering in computational mechanics 501
D. M. Butler: A new software architecture for parallel computation and visualization 517
D. W. Forslund, C. Hansen, P. Hinker, W. St. John, S. Tenbrink and J. Brewton: High-speed networks, visualization, and massive parallelism in the Advanced Computing Laboratory 521
P. Hajela and L. Berke: Neural networks in structural analysis and design: an overview 525
K. J. Cios, A. Vary, L. Berke and H. E. Kautz: Application of neural networks to prediction of advanced composite structures mechanical response and behavior 539

Vol. 3, No. 5

J. W. Edwards and **J. B. Malone** 545 Current status of computational methods for transonic unsteady aerodynamics and aeroelastic applications

N. Agbayani, D. Sriram and **P. Jayachandran** 571 An object oriented framework for steel frame design: implementation issues

C.-H. "John" Wu and **D. A. Roland** 589 A dynamically reconfigurable multiprocessor system for high-order bidirectional associative memory-based image recognition

W. Cheung, F. P. Ferrie, R. Dimitrakopoulos and **G. Carayannis** 601 Computer vision-based rock modelling

Technical Note
P. Oliveira, J. Blair-Fish, S. McKee and **C. Coles** 609 Parallel Lagrangian relaxation in power scheduling

i Calendar of Events

vii Announcements

Vol. 3, No. 6

R. A. Blech, E. J. Milner, A. Quealy and **S. E. Townsend** 613 Turbomachinery CFD on parallel computers

C. Bischof, G. Corliss, L. Green, A. Griewank, K. Haigler and **P. Newman** 625 Automatic differentiation of advanced CFD codes for multidisciplinary design

M. Rais-Rohani, R. T. Haftka, B. Grossman and **E. R. Unger** 639 Integrated aerodynamic-structural-control wing design

F. Peña and **R. Logcher** 651 Capturing design assumptions for rational coordination, integration and negotiation in the design process

S. Chandra, D. I. Blockley and **N. J. Woodman** 661 An interacting objects physical process model

C. Carey, H.-C. Chen, G. Golub and **A. Sameh** 671 A new approach for solving symmetric eigenvalue problems

A. Parvin and **T. G. Toridis** 681 Comparative study of interior and exterior wall–floor connections

Book Reviews

K. L. Lawrence 691 The Finite Element Method—Basic Concepts and Applications, by D. W. Pepper and J. C. Heinrich

J. W. Bull 691 Computational Mechanics—Proceedings of the Asian Pacific Conference on Computational Mechanics, Hong Kong, 11–13 December 1991, edited by Y. K. Cheung, J. H. W. Lee and A. Y. T. Leung
